

VÖLKEL

THREADING SOLUTIONS ■ ■ ■

Hello,

spring is slowly arriving here in the Bergisches Land, bringing renewed momentum to many projects, workshops, and businesses. The perfect time to gain new impulses, optimize processes, and take a look at current developments.

In this newsletter, we show you why VÖLKEL has been **recognized as a trusted partner of the specialist trade**, how you can **reliably cut threads even in confined spaces**, and what **customized solutions LÖHER** offers when standard tools reach their limits.

Partner of PVH 2025 – VÖLKEL Ranked No. 1

VÖLKEL was awarded Partner of PVH 2025 in the precision tools category, achieving 1st place. This award is based on evaluations by the specialist trade and clearly reflects how our collaboration is perceived in practice.

For us, this is both a strong signal and a motivation to consistently deliver on our promise: highest delivery reliability, a broad and dependable product range, and clear processes in working with our partners.

When Space Is Limited: Thread Cutting with the VÖLKELE Tap Holder

Thread cutting quickly becomes a challenge in confined spaces. Conventional tap wrenches often reach their limits or make precise work unnecessarily difficult.

The VÖLKELE tap holder with ratchet is designed exactly for these situations. Thanks to its compact design and ratchet function, you can cut threads precisely even when there is not enough space for a full rotation.

This not only ensures clean results but also saves time and significantly reduces potential sources of error.

LÖHER Makes It Possible – Your Drill, Adapted to Your Machine

You've found the right drill for your application, but it doesn't fit your machine? That's exactly where we come in.

At LÖHER, we customize standard drills in our production facility in Remscheid to match your specific requirements. Fast, precise, and tailored to your application.

Typical modifications include:

- Reducing the Morse taper, e.g. from MK3 to MK2
- Converting to a cylindrical shank, e.g. Ø 13 for use in a chuck
- Additional custom solutions depending on the application

You don't get an "almost suitable" tool, but exactly what you need.
