

HexTap DS - The solution for limited space

In situations where space is limited or there is no room to maneuver, turning the tap wrench is extremely difficult or even impossible. To be able to cut threads quickly and cost-effectively even without removing parts, we have developed the **HexTap DS**.

The HexTap DS can be used in particular for applications in hard-to-reach places where it is not possible to work with a hand tap and tap wrench. The HexTap DS combines **rougher and finisher in one tool**, and the **rougher also has a pilot** for an accurately aligned tapping. With the HexTap DS, new threads can be produced without any problems and it is also ideal for recutting and repairing damaged threads.

Through its unique design the HexTap DS has different driving options. Due to the **internal hexagon**, you can work with a ratchet or an offset screwdriver and due to the **external hexagon**, the use with an open-end wrench is also possible.

Application:

- non abrasive material up to 900 N/mm²
- unalloyed and low alloyed steel
- for through and blind holes
- for thread cutting by hand

Please also check out our video on [YouTube](#).

Available in

M11 - M52

and also Mf up to

Mf 63 x 1,5

The VÖLKE HexTap DS taps are available **from stock**.
